# Blink LED Program

## Objective:

To verify that the Arduino Nano 33 BLE Sense Lite is working correctly by blinking the onboard LED(0ne way communication).

## Procedure:

1. Connected the Arduino Nano 33 BLE Sense Lite to the laptop using a USB cable.

2. Opened Arduino IDE.

3. Selected Arduino Nano 33 BLE as the board.

4. Selected the correct COM port.

5. Opened File → Examples → Basics → Blink.

6. Uploaded the program to the board.

7. Observed the onboard orange LED blinking continuously

## Program Logic:

- The LED is configured as an output.
- The LED is turned ON.
- The program waits for 1 second.
- The LED is turned OFF.
- The program waits for 1 second.
- The process repeats continuously.

## Observation:

The onboard orange LED blinked at a 1-second interval, confirming successful program upload and execution.
