

Serial Monitor Communication

Objective:

To understand communication between the Arduino Nano 33 BLE Sense Lite and the computer using the Serial Monitor(two way communication).

Procedure:

1. Connected the Arduino Nano 33 BLE Sense Lite to the laptop.
2. Wrote a program using `Serial.begin()` and `Serial.println()`.
3. Uploaded the program to the board.
4. Opened Tools → Serial Monitor.
5. Set the baud rate to match the program.
6. Observed the messages displayed on the Serial Monitor.

Program Logic:

- Serial communication is initialized.
- The Nano sends text messages to the computer.
- The Serial Monitor displays the received messages.

Observation:

The message "Hello from Nano" appeared repeatedly on the Serial Monitor window. Successful serial communication was established between the Arduino Nano 33 BLE Sense Lite and the computer.

Output Serial Monitor X

Message (Enter to send message to 'Ardu')
